

SQL Tutorial: install EMP-DEP, join

Fast notes on apartments schema and select

Courses: Database Systems, Databases and Information Analysis

Author: Pedro Furtado, professor at University of Coimbra, Portugal.

In this tutorial we learn how build an apartments schema

Software

PostgreSQL (latest) –(ALREADY INSTALLED) <http://www.postgresql.org/download/>

pgAdmin– (ALREADY INSTALLED) <https://www.pgadmin.org/>

1. Imagine you want to have a site with houses for sale. Think all the relevant information you need to have and how you could represent it. Decide how to represent and create the corresponding tables. Use onda.dei.uc.pt to create them, then generate the SQL and create in postgres.

Suggestion: what about for instance tables apartment, owners and apartmentPhotos?
